Comp-U-Save started in 1982 as a user group cooperative. It's sole purpose was to use the buying power of many and provide value and service to the group membership. Today while we have transcended our beginnings, we are still here to provide service and value. We have a varied selection of hardware, software, peripherals and supplies.

In keeping with our underlying philosophy, we have formed the Public Domain Software branch of our Company. *Software does not have to be expensive to be good!* There are literally thousands of programs that have been written and donated for use by the general public. These packages cost from a few dollars donated by users to the programmer to mere pennies for just the cost of a disk. This is where we come in. We have assembled a large body of programs for many of today's popular micros. These "Libraries" have been assembled by dozens of user groups and individuals across the country. All you have to do to enjoy this treasure trove of goodies is carefully read our catalog and circle the disk numbers. Now that's EASY!

We are NOT selling the software. What you pay is for our service. While we cannot guarantee any piece of software, we will replace any non-functioning disk.

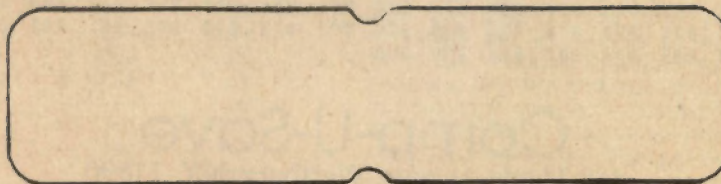

Any budding programmer out there wishing to share his effort with the rest of the "ole hackers" give us a call.

To the best of our knowledge, all the programs in this collection are in the Public Domain/Shareware. If this is not entirely correct, PLEASE let us know.
